Work experience

Period	08.2021 - Currently
Company	Intermade Luxembourg
Business type	IT Service Provider
Position	SharePoint & React Developer Software Engineer & Consultant
Projects	ML/TF Risk Assessment management tool – Luxembourg – August 2021 – Currently

Creation of a Risk assessment management tool that automatically calculate the risk level of investment funds on the basis of various criteria treated by matrix and risk exposure models. The client can also aggregate assessment of various funds at IFM level. The application generates reports in a PDF format. We use React & Hook, Typescript for the Front, Node in Back and MySQL for store the data.
Personal role => Full Stack developer

Mail Management application – Belgium – October 2021

- Creation of a web application to create, send, receive and distribute outgoing and incoming mail.
- Front end developed using Typescript, react and Microsoft Material UI.
- Backend Developed in C# using Web Api 2.0
- Creation and management of a T-SQL Database
- Integration and maintenance of the application within the company's intranet
- Personal role: Front-end Developer, Back-end Developer

ESG Compliance tool – Financial Services – Luxembourg – September 2021 – November 2021

Creation of a dynamic form where the client can create questionnaires with queries and others features and assign them to makers, checkers and auditor. When completed, the application generates a report in the form of PDF, with charts and additional information. I worked on the user interface for the creation of the form and others features. I participated to the creation of reports and their PDF. We use React & Hook, Typescript for the Front, Node in Back and MySQL for store the data.
Personal role => Full Stack developer

Regulatory initiative process – Belgium – October 2021 – November 2021

Creation of an application to manage the workflow of regulatory initiatives process from a Public Organization. The application creates automatically the structure of the sub-site dedicated to each new regulatory initiative, manage the workflow that is specific to the form of the regulation. The application is hosted in a SharePoint online environment.

We use React, Typescript and Material UI.

Time Off request application – Architect office – Luxembourg – November 2021

Improvements made on an existing application, in order to manage the variable working hours of the employees. On the basis of the working hours performed by the employee, the application manage the conversion into days off. The new development includes validation processes and management of users.

We use React & Hook, Typescript for the Front, .Net C# in Back and SQL Server for store the data.

I worked on the user and the administrator interface. I also participated in the development of .NET function for save data and store procedures with SQL.

Insurance calculator –Luxembourg – October 2021 – November 2021

We improve the basic program to integrate some legal obligations of the insurance company like the calculation the calculation of insurance premiums by risk category and the contribution to the natural disaster fund.

We use JQuery as Front End and .Net C# for the backend. All calculations are made on the backend. SQL Server is used to store data; we use Stored Procedures.
